Planning Document.

Dominik Rydval Lim.

Firstly, I plan to do all of the different screens, like start screen, game screen and result screen. The result screen should have to different texts, one that says that you went too fast and the other that the cat landed succesfully. After being done with all of the screens im going to work on the game mechanics, gravity, thrust and acceleration. After being done with the game mechanics i will make the game look good, like when pressing the space key the cat will moew and close its eye.
